**Insight Presentation Linking Worksheet**

When creating presentations in *Insight* you can link images to create side-by-side comparisons of two or more images. The following linking scenarios are possible:

1) Side-by-side comparisons
   Use this option when you want to have two images appear on screen at the same time during a presentation.

To create a side-by-side comparison:
Once in the presentation thumbnail window, position the two images so they are adjacent. You can do this by dragging and dropping the images within the presentation thumbnail window. Select the first image (it will be highlighted in white if selected). Click ‘link’ on the lower tool bar of the presentation thumbnail window. The second image should now be highlighted in purple as shown above. Double-click on the first image to open it in the image workspace. Size and position the image as you would like it to appear in the presentation. Double-click on the second image to open it in the image workspace along with the first image. Size and position the second image in relation to the first linked image. During the presentation the two images will appear side-by-side as shown above.
2) Linking a single image to many

Use this option when you want one static image to appear on the left to compare to many different images on the right.

To link one image to many:
Position three or more images so they are adjacent in the presentation thumbnail window. Follow the above instructions to link the first two images for a single side-by-side comparison. Once you have linked the first two images, make sure the first image is highlighted and click link. The third image should highlight in purple as shown above. You will need to size and position this third image as you have with the first two. Click link again if you want the fourth image to link to the first and so-forth.
3) Displaying more than one image at a time during a presentation

How to display more than two images on screen:
Follow the directions above for linking a single image to many. This will ensure that the first image is linked to each subsequent image. To link all the images together to display at once, you need to link each one to the other. Highlight the second image and click link. This links the second image to the third. If there is a fourth image, you will need to click link again to link the second image to the fourth. Repeat this process again with the third image by clicking link to link the third and fourth image together.
